

HIGH VOLUME BLOWER COMPRESSOR (HVBC)

The HVBC is ideally suited to improve performance of high volume, low pressure wells. HVBC increase the pressure of the low pressure gas to a usable pressure. "backing out" propane usage while increasing well production.

BENEFITS:

- Produce large volume of gas at lower pressure to supply multiple well pads.
- Lowers wellhead pressure to enable increased production.
- Economical to purchase and to run.
- Push gas into collection systems where pressures are low.
- Boost lower pressure gas to "back out" propane usage.
- Can be set up to run existing skids & hydraulics.
- Pre-filter to keep contaminants out of the blower.
- Higher volumes & pressures than the HVBC mini.
- Inlet scrubber to help remove liquids (can be installed with a liquid pump).
- Low maintenance and user friendly.
